Progress Report: Peanut Foliar Test 2009 Headland, Alabama
"Influence of Foliar Fertilizer and Inoculants on Peanut Yields and Grade"

June 2, 2009 Striptill Ga O6G single row
Dug October 23, 2009 Picked November 2, 2009

Neem oil and Optimize/Lift products produced approximately 500 lb/ac more peanut yield compared to the control (4460 lb/ac). However, all products produced yields between 4500 and 5000 lb/ac, except Actiguard, which produced 4100 lb/ac (Fig. 1).

Neem oil also produced a slightly higher quality peanut compared to the control (Fig. 2). The lowest peanut grades were observed for the FL 07 treated and un-treated seeds.

Figure 1. Peanut yields measured during the 2009 growing season at Headland, AL across different peanut products.
